Competency	Ddx	For	Against	Additional Info
Practice Based Learning and Improvement				
Systems Based Practice				
Mental Well Being				

Anchoring bias = sticking to initial impression despite new evidence and information

Availability bias = diagnosis chosen because it was recently seen

Gambling bias = 10 heads in a row, odds are still 50/50. If 5 cases CHF, the 6th may still be CHF

Confirmation bias = only place weight on information that confirms your initial diagnosis
